

Write a C program which gets the number of row from user and prints half pyramid using numbers.

Example of execution

```
Enter number of rows: 5
1
1 2
1 2 3
1 2 3 4
1 2 3 4 5
```

Variation: write a C program which gets the number of row from user and prints pyramid using numbers.

Example of execution

```
Enter number of rows: 5
      1
     2 3 2
    3 4 5 4 3
   4 5 6 7 6 5 4
  5 6 7 8 9 8 7 6 5
```

Note that start number and end number of each row are increased by the row number is increased. Each number in a row increases until it reaches center of row and, from center, it decreases until end.
